Behavioral therapy and music therapy for children with autism. Methods and mode of action of the two interventions

GRIN Verlag **Document from the year 2019 in the subject Social Work, , language: English, abstract: Autism is one of the most serious mental illnesses in children. A cure is not yet possible. But there are special therapies that relieve the symptoms and enable those affected to lead a self-determined life. Social work can thus provide lasting support for autistic people in their development. In which areas can therapy help? And which therapies are particularly promising? Julika Schira presents behavioral and music therapy in her publication. Her book provides a well-founded overview of the different forms of autism and their symptoms. Building on this, Schira explains the basics and methods of behavioral and music therapy. She weighs the advantages and disadvantages of the two approaches against each other and thus supports those affected in the decision for or against therapy. Look Me in the Eye

My Life with Asperger's

Crown **NEW YORK TIMES BESTSELLER • “As sweet and funny and sad and true and heartfelt a memoir as one could find.” —from the foreword by Augusten Burroughs** Ever since he was young, John Robison longed to connect with other people, but by the time he was a teenager, his odd habits—an inclination to blurt out non sequiturs, avoid eye contact, dismantle radios, and dig five-foot holes (and stick his younger brother, Augusten Burroughs, in them)—had earned him the label “social deviant.” It was not until he was forty that he was diagnosed with a form of autism called Asperger’s syndrome. That understanding transformed the way he saw himself—and the world. A born storyteller, Robison has written a moving, darkly funny memoir about a life that has taken him from developing exploding guitars for KISS to building a family of his own. It’s a strange, sly, indelible account—sometimes alien yet always deeply human.

I Am Aspiengirl

The Unique Characteristics, Traits and Gifts of Females on the Autism Spectrum

Aspiengirl(r) Have you ever wondered why she says she feels different to her peers? Wondered why life seems challenging for her? Her peers seem to gracefully and naturally meet their milestones, yet she has reached some developmental milestones early and some late. She may have spoken and read early, asking an endless array of questions. Maybe at age four she was teaching herself to read as you drove down the road by reading street signs. She may have been an overly active child, had sensory issues, or had a speech delay. You knew she was bright from early

on, with a sprinkle of some anxiety, social and eating issues, yet the professionals just cannot find an explanation that completely fits her. She may be very artistic, whether she sings, draws, paints, or writes, at times, too mature for her age. Yet, she struggles socially and emotionally, acting and appearing younger than her peers. She may be ten years old now, yet none of your research completely fits her or maybe you have just now come across some information on females that completely makes sense to you. Maybe she is "Aspien," a young female with Asperger Syndrome or High-Functioning Autism. She has a unique constellation of super-abilities, strengths and challenges. She may feel or say that she is from another Planet, Planet Aspien(r). If you are looking for a book on the often perplexing and unique female Autism Spectrum traits, then this is the book for you. Watch for "I am AspienWoman," coming soon.

Women with Autism

Accepting and Embracing Autism Spectrum Disorder as You Move Towards an Authentic Life

Internationally acclaimed life coach, Dr. Claire Jack, draws on her extensive experience of working with women with autism, in addition to her personal experience as a woman with autism, to help you shape the life you deserve. This book takes you through the stages you might encounter in coming to terms with your autism - from fear to relief, shame to self-validation, confusion to excitement - so that you can lead a life which respects and celebrates your unique needs. Do you want to continue living a life which is just ok? Or do you deserve to live a life which allows you to embrace your true self? If "ok" isn't enough any more, this book will support you in creating the changes you desire. So many women with autism spend their lives masking, or camouflaging, their autistic symptoms that they lose their sense of self. This book helps you accept yourself, as you are, and move towards a point of authenticity. After a lifetime of feeling confused, emotionally overwhelmed, socially awkward and being considered "odd" by others, many women become so good at camouflaging that they forget who they are and what they need from life. They may suffer from low self-esteem, anxiety, depression and self-sabotaging coping mechanisms. Masking seems like a common sense approach to pass as "normal", but the cost is huge. This book explores what it is to live in a world where you stop trying to be that square peg fitting into a round hole, and explore how you can make the hole fit your needs instead. From mundane everyday decisions to life changing choices, you'll learn how to create a world in which you and others value you. This book takes you on a journey, from exploring how and why you might choose to seek out a diagnosis, to how to nurture your unique autistic brain with passions and interests, to how to create healthy social boundaries and develop emotional regulation strategies. You're provided with exercises which encourage you to think about what autism means to you and how you can practically apply what you've learned. Throughout, you're provided with insights into the experiences of the many inspirational women I have worked with who, like you, have faced considerable challenges in their lives and who have been determined to turning their lives around.

Keep Clear

My Adventures with Asperger's

Scribe Us A wonderfully bittersweet, funnystrange account of living unwittingly with Asperger's syndrome. It is only after a crack-up, at the age of 55, that Tom Cutler gets the diagnosis that allows him to make sense of everything that's come before, including his weird obsessions with road-sign design, magic tricks, spinning tops, and Sherlock Holmes. The final realization that he has Asperger's allows a light to dawn on the riddles of his life: his accidental rudeness, maladroitness, Pan Am smile, and other social impediments. But, like many with Asperger's, Tom possesses great facility with words, and this shines through this exceptionally warm, bright, and moving memoir, which is alternately strikingly revealing, laugh-out-loud funny, and achingly sad. Tom explores his eccentric behavior from boyhood to manhood, examines the role of autism in his strange family, and investigates the scientific explanations for the condition. He recounts his anxiety and bewilderment in social situations, his sensory overload, his strange way of dressing, and his particular trouble with girls. He shares his autistic adventures in offices, toyshops, backstage in theaters, and in book and magazine publishing houses, as well as on--or more often off--roads.

Imperfect Chemistry

Mary Frame **Lucy London puts the word genius to shame. Having obtained her PhD in microbiology by the age of twenty, she's amassed a wealth of knowledge, but one subject still eludes her—people. The pendulum of passions experienced by those around her both confuses and intrigues her, so when she's offered a grant to study emotion as a pathogen, she jumps on the opportunity. When her attempts to come up with an actual experiment quickly drop from lackluster to nonexistent, she's given a choice: figure out how to conduct a groundbreaking study on passion, or lose both the grant and her position at the university. Put on leave until she can crack the perfect proposal, she finds there's only one way she can study emotions—by experiencing them herself. Enter Jensen Walker, Lucy's neighbor and the one person on the planet she finds strangely and maddeningly appealing. Jensen's life is the stuff of campus legend, messy, emotional, complicated—in short, the perfect starting point for Lucy's study. When her tenaciousness wears him down and he consents to help her, sparks fly. To her surprise, Lucy finds herself battling with her own emotions, as foreign as they are intense. Serotonin Receptors in Neurobiology

CRC Press A number of developments spanning a multitude of techniques makes this an exciting time for research in serotonin receptors. A comprehensive review of the subject from a multidisciplinary perspective, *Serotonin Receptors in Neurobiology* is among the first books to include information on serotonin receptor knockout studies. With contributions from leading experts in their fields, the book explores serotonin receptors from a broad-based, multidisciplinary approach. The approaches described vary from molecular biological techniques to fluorescence microscopy and imaging, to genetic manipulation in animal models, providing a wide range of tools to study serotonergic phenomena. While each of these approaches has its own advantages and limitations, the synthesis of information and knowledge achieved from studies using multiple approaches will result in a comprehensive understanding of the underlying complex phenomena involved in serotonergic signaling and its implications in health and disease. The book provides an overall understanding of these receptors based on currently used methodologies and techniques. It describes specific experimental procedures that will be of use to researchers interested in addressing similar problems involving other G-protein-coupled receptor signaling systems.

The Metaphorical Brain

Frontiers Media SA Metaphor has been an issue of intense research and debate for decades (see, for example [1]). Researchers in various disciplines, including linguistics, psychology, computer science, education, and philosophy have developed a variety of theories, and much progress has been made [2]. For one, metaphor is no longer considered a rhetorical flourish that is found mainly in literary texts. Rather, linguists have shown that metaphor is a pervasive phenomenon in everyday language, a major force in the development of new word meanings, and the source of at least some grammatical function words [3]. Indeed, one of the most influential theories of metaphor involves the suggestion that the commonality of metaphoric language results because cross-domain mappings are a major determinant in the organization of semantic memory, as cognitive and neural resources for dealing with concrete domains are recruited for the conceptualization of more abstract ones [4]. Researchers in cognitive neuroscience have explored whether particular kinds of brain damage are associated with metaphor production and comprehension deficits, and whether similar brain regions are recruited when healthy adults understand the literal and metaphorical meanings of the same words (see [5] for a review). Whereas early research on this topic focused on the issue of the role of hemispheric asymmetry in the comprehension and production of metaphors [6], in recent years cognitive neuroscientists have argued that metaphor is not a monolithic category, and that metaphor processing varies as a function of numerous factors, including the novelty or conventionality of a particular metaphoric expression, its part of speech, and the extent of contextual support for the metaphoric meaning (see, e.g., [7], [8], [9]). Moreover, recent developments in cognitive neuroscience point to a sensorimotor basis for many concrete concepts, and raise the issue of whether these mechanisms are ever recruited to process more abstract domains [10]. This *Frontiers Research Topic* brings together contributions from researchers in cognitive neuroscience whose work involves the study of metaphor in language and thought in order to promote the development of the neuroscientific investigation of metaphor. Adopting an interdisciplinary perspective, it synthesizes current findings on the cognitive neuroscience of metaphor, provides a forum for voicing novel perspectives, and promotes avenues for new research on the metaphorical brain. Sensory Intelligence

We experience our environment in a unique way through our senses. Some people thrive in a busy environment with lots going on and many people involved. They like everything brighter, louder, hotter, faster and find these inputs enjoyable and stimulating. Others avoid a crowded, noisy environment and will escape to ordered tranquillity whenever they can. They prefer everything softer, milder, slower and quickly feel overwhelmed and irritated by too

much fuss and flutter. Sensory intelligence explains in clear layman's terms how this works to help you understand why you and others respond to sensory input the way you do. It then tells you how to modulate your senses to adapt to your environment and other people, or change your environment to fit your sensory preferences. It will help you to function more effectively and give you greater understanding and adaptability within your relationships, both at home and at work. ";Annemarie Lombard is bridging the gap between what professionals and researchers know about sensation and what the public would benefit from knowing ... When parents, partners, friends and co-workers understand each other and why they are reacting the way they do, it is easier to make adjustments ..."; Winnie Dunn (PhD OTR FAOTA), Professor & Chair Department of Occupational Therapy Education, University of Kansas Medical Center.

The Neural Basis of Mentalizing

Springer Nature Humans have a unique ability to understand the beliefs, emotions, and intentions of others—a capacity often referred to as mentalizing. Much research in psychology and neuroscience has focused on delineating the mechanisms of mentalizing, and examining the role of mentalizing processes in other domains of cognitive and affective functioning. The purpose of the book is to provide a comprehensive overview of the current research on the mechanisms of mentalizing at the neural, algorithmic, and computational levels of analysis. The book includes contributions from prominent researchers in the field of social-cognitive and affective neuroscience, as well as from related disciplines (e.g., cognitive, social, developmental and clinical psychology, psychiatry, philosophy, primatology). The contributors review their latest research in order to compile an authoritative source of knowledge on the psychological and brain bases of the unique human capacity to think about the mental states of others. The intended audience is researchers and students in the fields of social-cognitive and affective neuroscience and related disciplines such as neuroeconomics, cognitive neuroscience, developmental neuroscience, social cognition, social psychology, developmental psychology, cognitive psychology, and affective science. Secondary audiences include researchers in decision science (economics, judgment and decision-making), philosophy of mind, and psychiatry.

Purinergic Signalling in Neuron-Glia Interactions

John Wiley & Sons ATP, the intracellular energy source, is also an extremely important cell-cell signalling molecule for a wide variety of cells across evolutionarily diverse organisms. The extracellular biochemistry of ATP and its derivatives is complex, and the multiple membrane receptors that it activates are linked to many intracellular signalling systems. Purinergic signalling affects a diverse range of cellular phenomena, including ion channel function, cytoskeletal dynamics, gene expression, secretion, cell proliferation, differentiation and cell death. Recently, this class of signalling molecules and receptors has been found to mediate communication between neurons and non-neuronal cells (glia) in the central and peripheral nervous systems. Glia are critical for normal brain function, development and response to injury. Neural impulse activity is detected by glia and purinergic signalling is emerging as a major means of integrating functional activity between neurons, glia and vascular cells in the nervous system. These interactions mediate effects of neural activity on the development of the nervous system and in association with injury, neurodegeneration, myelination and cancer. Bringing together contributions from experts in diverse fields, including glial biologists,

neurobiologists and specialists in purinergic receptor structure and pharmacology, this book considers how extracellular ATP acts to integrate communication between different types of glia, and between neurons and glia. Beginning with an overview of glia and purinergic signalling, it contains detailed coverage of purine release, receptors and reagents, purinergic signalling in the neural control of glial development, glial involvement in information processing, and discussion of the interactions between neurons and microglia.

The Paraphilias

Changing Suits in the Evolution of Sexual Interest Paradigms

Oxford University Press, USA Of the thousands of papers and books about problematic sexual behaviors, most focus solely on sex crimes or so-called "hyper-sexuality" or "sexual addiction." Together, these publications present a grim and pessimistic prognosis for anyone who has unusual sexual interests of any type. This book challenges that view by providing a more informed and balanced review of what is known and what is not known about unconventional sexual interests. It is based on approximately thirty years of experience by the author concerning the assessment and treatment of paraphilias and unconventional sexual interests. **The Paraphilias: Changing Suits in the Evolution of Sexual Interest Paradigms** examines current and past perspectives concerning unconventional sexual interests associated with both criminal and non-criminal activities. Extensively referenced, it challenges the dogma that sexual interests are immutably determined during a single critical period and are thereafter unchangeable. The book provides extensive case histories and tables summarizing over 100 paraphilias and the latest research regarding them. It also reviews diagnostic criteria for the paraphilias. Analyses of current and past paradigms are presented together with new ways to understand, investigate, and provide meaningful and effective assistance to people with paraphilias. It is written for mental health clinicians and specialists in the fields of sexology and forensic psychiatry and psychology.
