CHOP SUEY, USA

THE STORY OF CHINESE FOOD IN AMERICA

Columbia University Press American diners began to flock to Chinese restaurants more than a century ago, making Chinese food the first mass-consumed cuisine in the United States. By 1980, it had become the country's most popular ethnic cuisine. Chop Suey, USA offers the first comprehensive interpretation of the rise of Chinese food, revealing the forces that made it ubiquitous in the American gastronomic landscape and turned the country into an empire of consumption. Engineered by a politically disenfranchised, numerically small, and economically exploited group, Chinese food's tour de America is an epic story of global cultural encounter. It reflects not only changes in taste but also a growing appetite for a more leisurely lifestyle. Americans fell in love with Chinese food not because of its gastronomic excellence but because of its affordability and convenience, which is why they preferred the quick and simple dishes of China while shunning its haute cuisine. Epitomized by chop suey, American Chinese food was a forerunner of McDonald's, democratizing the once-exclusive dining-out experience for such groups as marginalized Anglos, African Americans, and Jews. The rise of Chinese food is also a classic American story of immigrant entrepreneurship and perseverance. Barred from many occupations, Chinese Americans successfully turned Chinese food from a despised cuisine into a dominant force in the restaurant market, creating a critical lifeline for their community. Chinese American restaurant workers developed the concept of the open kitchen and popularized the practice of home delivery. They streamlined certain Chinese dishes, such as chop suey and egg foo young, turning them into nationally recognized brand names.

WALKER EVANS

CUBA

J Paul Getty Museum Publications "As novelist and poet Andrei Codrescu points out in the essay that accompanies this selection of photographs from the Getty Museum's collection, Evans's photographs are the work of an artist whose temperament was distinctly at odds with Beals's impassioned rhetoric. Evans's photographs of Cuba were made by a young, still maturing artist who - as Codrescu argues - was just beginning to combine his early, formalist aesthetic with the social concerns that would figure prominently in his later work."--Jacket.

DEVELOPING INTELLIGENT AGENT SYSTEMS

A PRACTICAL GUIDE

John Wiley & Sons Build your own intelligent agent system... Intelligent agent technology is a tool of modern computer science that can be used to engineer complex computer programmes that behave rationally in dynamic and changing environments. Applications range from small programmes that intelligently search the Web buying and selling goods via electronic commerce, to autonomous space probes. This powerful technology is not widely used, however, as developing intelligent agent software requires high levels of training and skill. The authors of this book have developed and tested a methodology and tools for developing intelligent agent systems. With this methodology (Prometheus) developers can start agent-oriented designs and implementations easily from scratch saving valuable time and resources. Developing Intelligent Agent Systems not only answers the questions "what are agents?" and "why are they useful?" but also the crucial question: "how do I design and build intelligent agent systems?" The book covers everything a practitioner needs to know to begin to effectively use this technology - including an introduction to the notion of agents, a description of the concepts involved, and a software engineering methodology. Read on for: a practical step-by-step introduction to designing and building intelligent agent systems. a full life-cycle methodology for developing intelligent agent systems covering specification, analysis, design and implementation of agents. FOR BETTER OR FOR WORSE? COLLABORATIVE COUPLES IN THE SCIENCES

Springer Science & Business Media In this volume, a distinguished set of international scholars examine the nature of collaboration between life partners in the sciences, with particular attention to the ways in which personal and professional dynamics can foster or inhibit scientific practice. Breaking from traditional gender analyses which focus on divisions of labor and the assignment of credit, the studies scrutinize collaboration as a variable process between partners living in the nineteenth and twentieth centuries who were married and divorced, heterosexual and homosexual, aristocratic and working-class and politically right and left. The contributors analyze cases shaped by their particular geographical locations, ranging from retreat settings like the English countryside and Woods Hole, Massachusetts, to university laboratories and urban centers in Berlin, Stockholm, Geneva and London. The volume demonstrates how the terms and meanings of collaboration, variably shaped by

disciplinary imperatives, cultural mores, and the agency of the collaborators themselves, illuminate critical intellectual and institutional developments in the modern sciences.
