There are, however, proven processes and tools that deliver successful PowerPoint content each and every time you use them. In this book he shares them, detailing his award-winning PowerPoint process and guiding you through three phases of presentation development—discover, design, and deliver. What's more, Parkinson is a Microsoft PowerPoint MVP—most valuable professional—an honorific bestowed by Microsoft on those with "very deep knowledge of Microsoft products and services." He shares not only his tips and best practices for presentation success, but also those from several of his fellow MVPs. Parkinson invites you to master PowerPoint as a tool—just like a paintbrush and paint—and to realize that the tool doesn't make the art, you do.

VSTO: USING C# TO CREATE POWERPOINT PRESENTATIONS

A PRACTICAL GUIDE TO AUTOMATING POWERPOINT PRESENTATION CREATION USING VISUAL STUDIO TOOLS FOR OFFICE

David Pollock This text will walk you through all that you need to know to create PowerPoint presentations programmatically. You can create them to be as fancy or as mundane as you wish them to be. We cover charts, tables, text, fonts, video, master slides, reporting, and more; everything that you need to create any presentation. Many companies are making the move to use PowerPoint as a form of visual reporting rather than only for developing presentations. Examples might include preparing a proposal, providing status reports, and high-content, detailed presentations. In these cases, the text on one slide might flow onto another, the fonts are generally smaller, there may be less white space, and the result much more resembles a structured report than it does a presentation. Automating the production of a report like this might greatly improve the quality of the result while reducing the time to produce it. This book provides step-by-step guidance for creating these presentations. BETTER PRESENTATIONS

A GUIDE FOR SCHOLARS, RESEARCHERS, AND WONKS

Columbia University Press Whether you are a university professor, researcher at a think tank, graduate student, or analyst at a private firm, chances are that at some point you have presented your work in front of an audience. Most of us approach this task by converting a written document into slides, but the result is often a text-heavy presentation saddled with bullet points, stock images, and graphs too complex for an audience to decipher—much less understand. Presenting is fundamentally different from writing, and with only a little more time, a little more effort, and a little more planning, you can communicate your work with force and clarity. Designed for presenters of scholarly or data-intensive content, Better Presentations details essential strategies for developing clear, sophisticated, and visually captivating presentations. Following three core principles—visualize, unify, and focus—Better Presentations describes how to visualize data effectively, find and use images appropriately, choose sensible fonts and colors, edit text for powerful delivery, and restructure a written argument for maximum engagement and persuasion. With a range of clear examples for what to do (and what not to do), the practical package offered in Better Presentations shares the best techniques to display work and the best tactics for winning over audiences. It pushes presenters past the frustration and intimidation of the process to more effective, memorable, and persuasive presentations.
