One Hundred Hints begins with a look into the mind of the professional gambler, then proceeds to examine all stages of the betting process, from preparing selections and assessing value, to the vital matter of accurate and consistent staking. The Hints are interspersed with excerpts from Mark's betting diary kept during the 1993 Flat Season, and with many amusing tales from over fifteen years of serious betting, notably the years Mark spent formulating the ground-breaking Pricewise column in the Racing Post. It reviews the efforts and ideas of sociologists, economists, anthropologists, and social psychologists who have employed a variety of methods to further our

understanding of why people gamble. Early "armchair" theorists relied more on conjecture than observation to arrive at highly speculative conclusions. Others, unable to divorce themselves from prevailing ideologies, forced their findings into whichever theoretical mold happened to be currently in vogue. To obtain more empirical data with which to test these theories, later investigators interacted directly with active gamblers by becoming participant observers in actual gambling venues. Those who preferred a qualitative approach observed and interviewed smaller numbers of current and former gamblers. Some were already committed gamblers themselves; others became card dealers, roulette croupiers, and other paid employees of commercial gambling establishments. Those who preferred a quantitative approach analyzed statistical data from questionnaire surveys of larger groups and special populations. Their aim was not only to determine the gambling habits and preferences of different sub-groups, but also to identify the demographic, environmental, and behavioral risk factors that are most likely to predict recreational and problem gambling. Owing to their methodological differences, some of the studies reviewed in this volume reflect the gambler's point of view while others represent that of the investigator. Despite their differences in orientation, most social scientists are convinced that gambling is a consequence of the particular social or subcultural environment in which the gambler lives. **The Psychology of Investing How to play the game and win! This book addresses a wide range of contemporary issues in decision research, such as how individuals deal with uncertainty and complexity, gender-based differences in decision-making, what determines decision performance and why people choose risky activities. The book presents results from academic research carried out over the last twenty years. A common theme is the study of decisions made in horserace betting markets, a research medium which offers a rich insight into decision-making in general and one which enjoys particular methodological advantages over laboratory-based simulations. This set of naturalistic studies explores the variety of individual motivations for betting, how people perceive and respond to the presence of uncertainty, the challenges of complex and turbulent information and the use of heuristics as a response, how decision-making performance is affected by structural or process-related features of the decision environment, and how men and women differ in their decision behaviour. What makes Handicapping Secrets of The Horse Racing Fanatic your absolute best bet to put more money in your pocket when wagering at the track?It's not just master handicapper Gordon Easton's four decades worth of powerful and proven betting systems... spot plays... and long-shot picking secrets, all brought together in one book for the first time anywhere. What's sets this book apart from all the rest is that retired mathematics professor Gordon Easton is a mathematical genius specializing in Numbers Probability Theory, who gives his readers a complete set of "plug and play" betting formulas that will let you cover more horses and results for every dollar you bet, shaving the odds in your favor. For example: Most people never win a Pick Six because they don't have the hundreds of dollars needed to put a lot of horses on a single ticket. They will bet many \$2 tickets instead. They could end up with several tickets with 3 or 4 winners... but none with 5 or 6 for the big win. But, by using Gordon's formulas, you are guaranteed to line up at least five winners on one ticket if you get a winner in each race. You'll also have a decent chance at getting a Pick Six... without spending a fortune. For example: Pick Six Formula #1 covers 4 horses in 1 race... 3 horses in 3 races... and 2 singles (your most likely winners). To put all of these horses on one ticket would cost you \$216. Using Gordon's formula... you can do this for only \$24, with the guarantee of 5 or 6 winners on one ticket if you have a winner in each race. There is no other place on the planet you can find this kind of incredibly valuable knowledge. **1001 Great Gambling Tips Summersdale Publishers LTD - ROW** Graham Sharpe has recruited some of the great and good of the gambling world to divulge their favourite betting suggestions, hints, tips, and strategies.
