### **BUSINESS CONTINUITY AND DISASTER RECOVERY PLANNING FOR IT PROFESSIONALS**

---

*Butterworth-Heinemann* Powerful Earthquake Triggers Tsunami in Pacific. Hurricane Katrina Makes Landfall in the Gulf Coast. Avalanche Buries Highway in Denver. Tornado Touches Down in Georgia. These headlines not only have caught the attention of people around the world, they have had a significant effect on IT professionals as well. As technology continues to become more integral to corporate operations at every level of the organization, the job of IT has expanded to become almost all-encompassing. These days, it's difficult to find corners of a company that technology does not touch. As a result, the need to plan for potential disruptions to technology services has increased exponentially. That is what Business Continuity Planning (BCP) is: a methodology used to create a plan for how an organization will recover after a disaster of various types. It takes into account both security and corporate risk management tactics. There is a lot of movement around this initiative in the industry: the British Standards Institute is releasing a new standard for BCP this year. Trade shows are popping up covering the topic. \* Complete coverage of the 3 categories of disaster: natural hazards, human-caused hazards, and accidental and technical hazards. \* Only published source of information on the new BCI standards and government requirements. \* Up dated information on recovery from cyber attacks, rioting, protests, product tampering, bombs, explosions, and terrorism.

### **HOW TO IMPROVE THE FINANCIAL OVERSIGHT OF PUBLIC CORPORATIONS**

---

*International Monetary Fund* Many studies have highlighted how failures of public corporations (otherwise known as state-owned enterprises) can result in huge economic and fiscal costs. To contain the risks associated with these costs, an effective regime for the financial supervision and oversight of public corporations should be put in place. This note discusses the legal, institutional, and procedural arrangements that governments need to oversee the financial operations of their public corporations, ensure accountability for their performance, and manage the fiscal risks they present. In particular, it recommends that governments should focus their surveillance on public corporations that are large in relation to the economy, create fiscal risks, are not profitable, are unstable financially, or are heavily dependent on government subsidies or guarantees.

### **RISK MANAGEMENT AND CORPORATE GOVERNANCE**

---

*OCDE* This sixth peer review of the OECD Principles of Corporate Governance analyses the corporate governance framework and practices relating to corporate risk management, in the private sector and in state-owned enterprises. The review covers 26 jurisdictions and is based on a general survey of all participating jurisdictions in December 2012, as well as an in-depth review of corporate risk management in Norway, Singapore and Switzerland. The report finds that while risk-taking is a fundamental driving force in business and entrepreneurship, the cost of risk management failures is often underestimated, both externally and internally, including the cost in terms of management time needed to rectify the situation. The reports thus concludes that corporate governance should ensure that risks are understood, managed, and, when appropriate, communicated.

## ADAPTING TO CLIMATE CHANGE

### SIXTH REPORT OF SESSION 2009-10, REPORT, TOGETHER WITH FORMAL MINUTES, ORAL AND WRITTEN EVIDENCE

---

*The Stationery Office* Climate projections show that Britain can expect wetter winters, drier summers and a higher likelihood of flash-floods, heat waves and droughts. Yet adaptation to climate change has been given only a fraction of the attention that has gone into reducing greenhouse gases. The Government must build awareness and support for the wide-ranging and urgent programme of action that is needed to protect people, property and prosperity and safeguard the natural environment. Adapting infrastructure and homes will be expensive. To maintain current levels of flood protection for homes, real terms spending on flood defences will need to increase from its current level of around £600 million per annum to around £1 billion in 2035. Estimates in 2009 suggest that by the end of the century around £7 billion may be needed to improve the Thames flood barrier and tidal defences.

New homes being built now must be designed to cope with the inevitable changes in climate over the next 50 - 80 years. The Government must make adaptation and mitigation more central to the planning system. New developments should only be permitted if they are suited to future climates. Existing homes will also need to be adapted so that they are comfortable during hotter summers and better protected against the risk of flooding. The Government must help to kick start an integrated retro-fitting programme that covers adaptation, water efficiency and energy efficiency. Green infrastructure - such as water storage, greater tree cover and more open green spaces - must also be promoted.
